

ABSTRACT OF THE DISCLOSURE

An information input-output system comprises a mobile communication terminal, and a host computer that performs communications with the terminal over a radio transmission line  
5 and has a database relating to services that can be provided to the user of the terminal. This system also comprises an input-output gateway server that verifies whether the user is a subscriber who can be provided with a variety of services, and an input-output control unit that receives data from the  
10 database over an established line and then outputs the data.
